

POSITION DESCRIPTION – TECHNICAL LEAD

About InterPlex: InterPlex is a Northern Nevada based technology integration company that helps organizations achieve superior performance through the melding of their existing systems and processes with new and appropriate hardware and software technologies. The aim is to maximize return on investment and deliver a solution that yields real world benefits.

InterPlex operates in two core spaces:

1. Systems integration and development; specializing in legacy systems and wireless applications.
2. Wireless data connectivity; providing wireless Internet service, and wireless system training and testing.

InterPlex also partners with specialists in Internet security and monitoring, to ensure that the networks on which our applications run are secure.

InterPlex International was established in 2001 by leading industry professionals who recognized the importance of assisting companies leverage their legacy data systems in the contemporary web-based world of commerce. The company has since grown to include the provision of wireless solutions that not only include data connectivity, but the applications that make wireless technologies so attractive to industry today.

Job Title: Technical Lead

Division: Systems Integration & Development

Reporting To: Systems Integration & Development Director

Employment Arrangement: Full-time contract

Location: Carson City, Nevada

Job Description: The Technical Lead shall report to the Systems Integration & Development Director and be responsible for the:

- directing a team of solution developers in the development of n - tier applications using web (specifically .NET) technologies;
- provision of support to the project manager, and in some cases performing the project management role;
- assisting in the pre-sale process; and
- completion of the tasks on a timely basis.

Projects will be a mix of internal and client-driven, and specifically are associated with the development of web-based interfaces for legacy systems and wireless (mobile) applications.

This is a senior role that requires a multi-skilled individual that can work in a collaborative, team environment. The incumbent shall be a self-starter and

demonstrate a wide degree of creativity and initiative, and have strong problem solving skills. They will be required to present design concepts and articulate strategies behind ideas, and assist in the development of prototypes. Additionally, the seasoned Technical Lead must possess strong leadership and management skills, fulfill the project management role when required, and mentor system integration & development staff. The incumbent will also have the opportunity to play a pre-sales consulting role.

The Technical Lead will be a member of a project team that typically consists of a project manager, DBA solution developer, DBP solution developer, app server developer, web designer, and technical writer. The team shall be further supported by quality assurance and deployment engineers. Ideally the candidate will have a strong background in consulting and project-oriented development efforts.

The Technical Lead shall maintain a close relationship with the PMO Office to help delivery projects. Project management related responsibilities include requirements definition, delivering detailed technical analysis to the development team, acting as a technical liaison, and reporting project status.

Training Experience

& Computer science/engineering degree or similar, with 7-10 years of practical experience. A strong consulting background is highly desired. At least 2 years experience as a technical lead is required.

Required Skills:
